

To whom this may concern, I was informed by my satellite radio provider that there were attempts to remove the instant weather and traffic stations from the programming. This should not be allowed to happen. Just yesterday, when I was leaving town for Memorial Day weekend, I used this service to find an alternate route around an accident and was able to save time accordingly. This is a great service that XM provides, where as most of my local radio stations were playing commercials while I was stuck in bumper to bumper traffic. So please do not allow the NAB to stop the use of a service that I value. Thank you.
